Ti-Max Z Series

As specialists in ultra-high-speed rotary equipment, NSK is passionate about creating innovative products that deliver outstanding value. NSK manufactures almost all parts in-house to guarantee the highest precision, reliability and unmatched performance of all products. The Ti-Max Z contra-angle and air turbine series resulted from NSK's constant quest to make the impossible possible.

S-Max M Series

The S-Max M series is the next phase of evolution of our globally acclaimed handpieces. These new models are the embodiment of NSK's expertise in handpieces. The M series delivers the reliability and safety demanded by both practitioners and the ever-changing standards of the dental instrument industry.

Integrated Handpieces

Ergonomic : Functional : Reliable

After 35 years of outstanding global success, the classic NSK EX handpiece series has now evolved into a new stage. NSK FXm handpiece series – a modernisation of the EX series. The traditional NSK simple design technology, functional reliability, durability, and cost effective pricing still remains, but FXm has been updated to an integrated design in response to modern demands.

Create Synergy in Implantology by linking the Surgic Pro and Variosurg together with SG Link Set

20% OFF

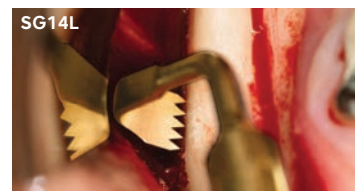

"When we implemented the use of VarioSurg3 units into our practice it meant increased portability in theatre settings and cut time for periodontal surgeries by 20-30%. From an implantology perspective, it also meant extractions, bone grafting (using block grafts), and sinus grafting were made safer and faster. These units are so indispensable, that using VarioSurg3 decreases time, increases safety, and provides better patient outcomes."

Dr Steven Soukoulis

Owner at Greenhill Periodontics and Implants Specialists & Industry Consultant at Dental Implant Registry (NFP).

3-STEP PROCEDURE

1.

The MultiPeg™ is attached to the implant. It screws effortlessly into the implant's internal threads (approximately 6-8 Ncm of torque).

2.

Just aim for the magnet on top of the MultiPeg™. Non-invasive, objective, accurate and repeatable. The peg is excited by magnetic pulses and vibrate due to the stiffness in the contact area between the bone and the implant surface.

3.

An ISQ value is generated and shown on the display. This reflects the level of stability on the universal ISQ scale – from 1 to 99. The higher the ISQ value, the more stable the implant.
